Professional Summary

I am a bioinformatician interested in the interplay between the gut microbiome and host mood and mental health. The focus of my research currently lies in understanding microbiome-gut-brain communication from a theoretical ecology/bioinformatics perspective. In particular, I am interested in understanding the role of stability and volatility of the gut microbiome in anxiety and depression and in integrating different types of 'omics data in a biologically interpretable manner. As a bioinformatician, I value clear and easily interpretable analysis of complex data in order to promote interdisciplinary collaboration. I have a strong sense of justice and am committed to fostering a culture of inclusivity, equity and diversity in academia.

Employment

April 2021 - **Postdoctoral Researcher, University College Cork, Cork**
Present Lead bioinformatician for the Cryanlab
- Awarded the '21/'22 APC Scientific Excellence award

Education

2018 - 2021 **PhD, University College Cork, Cork**
Thesis Title: Mining the Microbiome for Markers of Microbiota-Gut-Brain Communication and Mental Health
- Supervised by Prof. J.F. Cryan, Prof. T.G. Dinan and Dr. M.J. Claesson

2014 - 2017 **MSc, Utrecht University, Utrecht**
Research Trajectory: Molecular and Cellular Life Sciences - Bioinformatics

2010 - 2013 **BSc, Utrecht University, Utrecht**
Majored in Biology with a Minor in Art History

Research Contributions

As a bioinformatician with a background in molecular biology, microbiology and theoretical ecology, I have contributed to the microbiome field and, most significantly, the microbiome-gut-brain axis field.

- I have developed a method to measure microbial volatility and have associated it with severity of the host stress response. Volatility is now studied in many microbiome fields.
- My microbiome bioinformatics guidebooks have been used by several lecturers and research groups across many universities, both for research and educational purposes.
- I have developed and continue to maintain several free and open source bioinformatics and statistical analysis tools in the R programming language.

Mentorship

2022 - Present **Benjamín Valderrama, PhD candidate, University College Cork, Ireland**
2022 - Present **Emma Todd, PhD candidate, Deakin University, Australia**
2021 - 2022 **Alessandro Atzeni, PhD candidate, University of Rovira i Virgili, Spain**

- 2021 - 2022 **Samuele Laudani**, *PhD candidate, University of Catania, Italy*
2019 - 2020 **Simon Spichak**, *MSc candidate, University College Cork, Ireland*

Research Skills

Academic: Study development • Mentoring • Grantsmanship • Scientific writing
Bioinformatics: 16S analysis • metagenomic shotgun analysis • RNAseq analysis • Metabolomics analysis
• Microbiome functional inference • Volatility analysis • Multi-omics integration
General Programming: R • tidyverse • R package development • Python • Bash • Server management
Statistics: Experimental design • Data analysis • Generalised linear models • Generalised linear mixed effects models • Principal component analysis • Compositional data analysis • Mediation analysis

Selected Grants, Honours & Awards

Grants: Principal applicant

- 2023 **The role of microbiome-immuno-metabolic interactions in depression and anxiety disorders**, *The Netherlands Organization for Scientific Research (NWO), Veni Submitted.*

Grants: Co-applicant

- 2023 **Role of prenatal stress in the co-development of children's gut microbiome and socioemotional problems**, *Canadian Institutes of Health Research (CIHR)*
Awarded: 1,735,000 CAD.
- 2023 **PROGRESSION: Probiotic augmentation of antidepressant treatments in people with major depression and anxiety**, *UK Research and Innovation (UKRI), Development pathway funding scheme (DPFS)*
Submitted.

Grant Consortia Network

I have been actively involved in numerous grant consortia and have forged a strong international collaborative network with several leading researchers and groups, including Carmine Pariante, Marion Leboyer, Annamaria Cattaneo, Brenda Penninx, Igor Branchi, Rima Kaddurah Daouk, Rob Knight, Sarkis Mazmanian, Oliver Fiehn, John F. Cryan, Gerard Clarke, Ines Thiele, Beatrice Passani, Daniela Cota, Sophie Layé, Nathalie Delzenne, Felice Jacka, Livia de Picker, Soyoung Park, Francesco Papaleo, Eric Guerci.

Honours

- 2021 - 2022 **APC Microbiome Ireland Scientific Excellence award**

Awards

- 2023 **European Society of Neurogastroenterology and Motility (ESNM)**, *Best abstract for Translational Science award*, Awarded during the NeuroGastro 2023 meeting in Bucharest.
- 2018 **4th Intl Symposium on Resilience Research**, *Best poster award*, Awarded during Resilienz meeting in Mainz.
- 2016 **GENIEUR travel grant**, To attend "Molecular Methods in IBS Research: genetics, epigenetics and microbiota research" in Heidelberg.
- 2015 - 2016 **ERASMUS+ Traineeship**, For MSc internship in Cork.

Board & Committee membership

Editorial Boards

- 2023 - Present **Gut Pathogens**, *Associate Editor, Springer Journal*

Scientific committees

- 2023 - Present **ECNP Resilience Network**, *Junior shell member*

Academic committees

- 2018 - 2023 **APC Wellbeing Committee**, *Founding member, served as chair in 2021.*

Organisational experience

- 2021 **Canadian Biomarker Integration Network for Depression (CAN-BIND)**, *Chaired session.*

Selected Publications

- 2023 **Thomaz FS Bastiaanssen, Thomas P Quinn, and Amy Loughman**, Bugs as Features (Part I): Concepts and foundations for the compositional data analysis of the microbiome–gut–brain axis, In: *Nature Mental Health*

This is part one of a two-part guidebook on the bioinformatic analysis of microbiome-gut-brain axis experiments. In the first part, we cover the foundations. The guidebooks have already been adopted by multiple research groups and are currently taught at Boulder University, Colorado. Notably, it includes a detailed and well-annotated demonstrative microbiome-gut-brain axis analysis in R. This publication demonstrates my aptitude in clearly demonstrating complex bioinformatics techniques.

- 2023 **Thomaz FS, Bastiaanssen, Thomas P Quinn, and Amy Loughman**, Bugs as Features (Part II): A perspective on enriching microbiome-gut-brain axis analyses with multidisciplinary techniques, In: *Nature Mental Health*

This is part two of a two-part guidebook on the bioinformatic analysis of microbiome-gut-brain axis experiments. In the second part, we give our perspective on the current state of the microbiome-gut-brain axis field and its challenges. We introduce and discuss techniques from adjacent fields that could be used to address these issues. It includes a heavily annotated demonstration of these techniques in R. This publication demonstrates my interest in multidisciplinary research and clear vision forward for the microbiome-gut-brain axis field.

- 2023 **Thomaz FS Bastiaanssen, Sarah-Jane Leigh, Gabriel SS Tofani, Cassandra E Gheorghe, Gerard Clarke, and John F Cryan**, Kronos: A computational tool to facilitate biological rhythmicity analysis, In: *bioRxiv* (preprint)

This is a free and open-source bioinformatics tool I developed in order to analyse circadian rhythmicity data. This data was collected as part of an ongoing study, but no existing bioinformatics tools could adequately handle our relatively straightforward experimental design. Kronos has enjoyed much interest at scientific conferences year and has been adopted by several groups studying the circadian rhythmicity in biological data. This manuscript demonstrates my ability to develop specialised bioinformatics tools to address emerging research questions.

- 2021 **Marcus Boehme, Katherine E Guzetta, Thomaz F S Bastiaanssen, Marcel van de Wouw, Gerard M Moloney, Andreu Gual-Grau, Simon Spichak, Loreto Olavarria-Ramirez, Patrick Fitzgerald, Enrique Morillas, Nathaniel L Ritz, Minal Jaggar, Caitlin S M Cowan, Fiona Crispie, Francisco Donoso, Evelyn Halitzki, Marta C Neto, Marzia Sichetti, Anna V Golubeva, Rachel S Fitzgerald, Marcus J Claesson, Paul D Cotter, Olivia F O'Leary, Timothy G Dinan, and John F Cryan**, "Microbiota from young mice counteracts selective age-associated behavioral deficits", In: *Nature Aging*

I am co-first author in this publication. In this study, we demonstrate that faecal microbiome transplantation from young mice can restore neurobehavioural symptoms of aging in aged recipients. This paper demonstrates my ability to design and lead complex preclinical studies and my expertise in integrating complex behavioural data with multiple types of 'omics (metabolomics, transcriptomics, metagenomics) data.

- 2021 **Thomaz F S Bastiaanssen, Anand Gururajan, Marcel van de Wouw, Gerard M Moloney, Nathaniel L Ritz, Caitriona M Long-Smith, Niamh C Wiley, Amy B Murphy, Joshua M Lyte, Fiona Fouhy, Catherine Stanton, Marcus J Claesson, Timothy G Dinan, John F Cryan**, "Volatility as a Concept to Understand the Impact of Stress on the Microbiome", In: *Psychoneuroendocrinology*

In this study, I introduce the metric **volatility**, the degree of compositional change in a microbial ecosystem, and show that volatility is associated with an exacerbated stress response, both in mice and in humans. This manuscript demonstrates my strong ecological background and my ability to develop and validate new, informative metrics to assess complex phenomena such as the stress response.
